Feature-Rich Data Scrambling
Integration with Solution Manager
BPL Modeler

SAP Test Data Migration Server

Create size-reduced system copies for development, testing, quality assurance, and training projects structured by typical migration requirements (non-production systems).

Powered by Telesto Group

What is SAP Test Data Migration Server?

SAP Test Data Migration Server is a high-speed data extraction tool that populates your development, test, quality assurance, and training systems with specified SAP business data from your live productive environment. SAP TDMS enables you to create small, easy-to-use test environments with consistent, relevant extracts of real business data while minimizing infrastructure and maintenance expenses.

Improved Quality, Higher Flexibility

…always have DEV and QA systems populated with business relevant and up-to-date data to reduce bug-fixing time?

Scramble Sensitive Data

…want to ensure data privacy and stay SOX compliant, while working with the external developers and subcontractors?

Reduced Infrastructure Expenditures

…need to add extra hardware and more disk space for each and every project?

Key Business Challenges:

- Large and quickly growing SAP systems
- Multiple parallel IT projects
- Already strained Basis Team
- Test systems have outdated test data
- Productive system copy is too expensive and rework intensive
- Challenge of scrambling sensitive data
- Need to test and validate in-house developments
- Demand to simulate new business scenarios

Telesto Value:

- Standard methodology for data extraction – Step-by-Step to success
- Trained and Certified data and system experts
- Average 15+ years of SAP multiple project exposure
- Strong ties, contract and lease agreement with SAP for technology and product support
- Turn-key solution: Software, methods and service
